# We Are The Weather Makers: The History Of Climate Change

## **Synopsis**

Now in paperback! Every young person who cares about preserving the planet needs to know what's inside this book and follow the authors' call to action. First published for an adult readership, THE WEATHER MAKERS got kudos for its solid science and powerful message. Now this accessible edition speaks directly to young adults, offering a clear look at the history of climate change, how matters will unfold over the next century, and what we can do to prevent a cataclysmic future. Newly featured are twenty-five practical tips for living a greener lifestyle at home, in school, in the community, and ultimately, on Earth.

## **Book Information**

Paperback: 320 pages

Publisher: Candlewick; 1 edition (March 9, 2010)

Language: English

ISBN-10: 0763646563

ISBN-13: 978-0763646561

Product Dimensions: 6 x 0.8 x 9 inches

## **Customer Reviews**

Grade 9 Up This adaptation of Flannery's 2005 adult publication shows the results of meticulous research and superb grounding in scientific facts. It lays out, in great detail, the ways in which humans have changed our weather and the possible outcomes for us and our planet if we continue as we are going. Clearly labeled illustrations accompany difficult concepts and greatly aid in understanding the sometimes-complicated climate models. Each chapter ends with a "Call to Action" describing how humans can make relatively simple changes in our lifestyle to reduce our impact on the planet. Yet, despite the many great aspects of this book, one issue clearly reduces its usefulness. The research and issues surrounding global warming are changing at an incredible pace and the adaptation presented here, while doing some updates, is not sufficiently current. For example, Chapter 22 covers the Kyoto Protocol, which, though mightily relevant in 2005, is being

eclipsed by the upcoming Copenhagen (December 2009) conference, where the United States is poised to play a much more involved role. The Copenhagen Climate Conference is not mentioned. Some of the research on animals (harp seals, for example) that are endangered does not update past 2005. Additionally, the sections entitled "Call to Action" are often aimed at adults rather than teens. Not many teens will be weatherproofing their homes, checking water heaters, or buying new appliancesâ "just yet anywayâ "and this disconnect is jarring.â "Denise Schmidt, San Francisco Public Library, CA Copyright Â© Reed Business Information, a division of Reed Elsevier Inc. All rights reserved. --This text refers to an out of print or unavailable edition of this title.

Adapted by award-winning science writer Walker, this youth edition of Flanneryâ ™s adult title, *The Weather Makers* (2005), speaks straight to â œthe generation who will act on global warmingâ • about the realities of climate change and the devastating consequences if humans donâ ™t alter their behavior to protect Earthâ ™s atmosphere, its â œgreat aerial ocean.â • The language is both blander and more direct than in Flanneryâ ™s adult book: an opening section originally titled â œGaiaâ ™s Toolsâ • has been changed to â œEarthâ ™s Carbon Cycle and You,â • for example. What remains are the lucid explanations of science, illustrated with numerous examples, including many chosen specifically for this youth edition; and each chapter ends with suggested ways that young people can reduce the carbon emissions in their homes, schools, and communities. Unfortunately, the dull format, featuring grainy, dim, black-and-white photos and cramped charts and maps, isnâ ™t a great advertisement for the eco-friendly printing process that produced this book; but the comprehensive coverage of issues and urgent call to action make this a must-have resource for both school and public libraries. Grades 7-12. --Gillian Engberg --This text refers to an out of print or unavailable edition of this title.

## Interesting

I have recently read *We are the Weather Makers* by Tim Flannery. This book is an expository selection about the history of climate change, past effects of it, future events to come as a response to global warming, and what we are going to do about it. The book consists of three parts, all of which I have read. Part One, *Earth and the Carbon Connection*, is about the history of climate change. Part Two, *Endangered Habitats*, is about species of plants and animals that have been driven extinct as a consequence of global warming, and species that are going to if the rate it is developing stays the same. Part three, *What's to Come?*, is about what could happen to our planet, how scientists

figured this out, and multiple solutions to climate change and their pros and cons. One feature in this book that I adored was the Call to Actions. They were at the end of each chapter, and were things that young adults could do to help this problem in our own homes and hometowns. I rated part one three out of ten, because although effective in getting the little points and big picture around to me, it went about doing that in a boring way. There are a lot of long scientific words to be memorized and, you have to reread almost the whole thing from time to time. Often I would find myself reading a paragraph in it three or four times before I got what it was saying! I rate the second part an eight out of ten. This was my favorite part of the book. It wasn't boring, it vividly described what happened/would happen in the future to threatened species, and rereading was minimal for me. I rated the third and final part six out of ten. It had some boring parts, and some parts I had to reread, but it also had some really interesting chapters about renewable energy, environmentally safe cars, nuclear power plants, and groups that have taken action. One feature in this book that I adored was the Call to Actions, short articles at the end of each chapter talking about things that young adults could do to help this global warming in our own homes and hometowns. So overall, the first part is horrible, although I ensure it is worth your time to fully read parts two and three, and read all the Call to Actions! Reviewed by a young adult student reviewer Flamingnet Book Reviews Teen books reviewed by teen reviewers

WE ARE THE WEATHER MAKERS is a great book for pre-teens and teens to learn about our climate and how it is changing. Starting out with how the carbon cycle works and how to learn to offset your carbon footprint, to sustainable energy sources such as the sun and wind power - this book covers it all. If you want to teach your children to be responsible and help fix our ailing planet, then this book is for you. Filled with a lot of information and examples of ways that other kids have helped make a change, it is a great tool for either the classroom or at home. Reviewed by: Angela S.
