The Strength Switch: How The New Science Of Strength-Based Parenting Can Help Your Child And Your Teen To Flourish

Synopsis

Unlock your children's potential by helping them build their strengths. This game-changing book shows us the extraordinary results of focusing on our children's strengths rather than always trying to correct their weaknesses. Most parents struggle with this shift because they suffer from a negativity bias, thanks to evolutionary development, giving them "strengths-blindness." Lea Waters demonstrates how we can not only help our children build resilience, optimism, and achievement but we can also help inoculate them against today's pandemic of depression and anxiety. As a strengths-based scientist for more than twenty years, ten of them spent focusing on strengths-based parenting, Waters has seen how this approach enhances self-esteem and energy in both children and teenagers. Yet more on the plus side: parents find it a particularly exciting and rewarding way to raise children. With many suggestions for specific ways to interact with your kids, Waters demonstrates how to discover strengths and talents in our children, how to use positive emotions as a resource, how to build strong brains, and even how to deal with problem behaviors and talk about difficult situations and emotions. As revolutionary yet simple as Mindset and Grit, *The Strength Switch* will show parents how a small shift can yield enormous results.

This is one of the most important parenting books that I have encountered. It takes many of the recent findings from positive psychology and applies them to parenting. At the time I am writing this review, there is no “look inside” feature available for this book, so I will list the chapters and their subheadings to give you a feel for the contents.

Positive Parenting is just one of the many new ways for parents to raise their children, and "The Strength Switch" is another tool that parents may use to help with that philosophy, and like other parenting tools, such as Love & Logic, it can even work with spouses and coworkers. Written by a PhD and mother who had already been utilizing Positive Psychology, Lea Waters shows parents how to take those concepts to help their children be the best versions of themselves. In a nutshell, the idea of Strength-Based Parenting, or SBP, is to focus not on improving children's weaknesses, but rather honing their strengths. By doing so, studies have shown that families have more satisfaction and positive emotions, and that these strengths help to accomplish tasks such as homework, conflict resolution, and reduce stress, by utilizing those strengths to find solutions. "The Strength Switch" includes lessons, personal stories from various parents, and exercises for the parents to complete, often times with their children. Some of the concepts are not new, such as letting the child know that the parent has noticed good things (the three assignments with A's) before even mentioning the bad (the one with a C). As she does throughout the book, Waters lets us know that our tendencies to do this are rooted in our genes and science, and she utilizes studies to show other helpful information, such as the ages when children show musical and athletic talents. Waters also looks at ways to change negative fixed mindsets (I'm terrible at....) to more positive growth-mindsets (This is a trouble area for me, but I can solve this problem by...), and teaches parents about scaffolding, a tool teachers use to take what children already know and build upon that. There is also a chapter on attention, something she acknowledges is difficult for even adults (we may work for an hour at a time, but our minds are constantly thinking about something else), yet we expect it in abundance from our children. What makes Water's book stand out compared to most others, however, is that she acknowledges that some people, those with ADHD, autism, and other

mental difficulties, have even more trouble with attention, and that SBP has shown positive influences (not cures, obviously) on these children. Waters also differentiates between generic and process-praise, showing parents how specific examples can show children that their strengths helped them to succeed. To help parents with many of these concepts, Waters provides a variety of websites. While no parenting book is going to be a page-turner, overall Waters keeps her book easy to read, even personable at times, and easy enough for most parents to read and understand without needing a background in education or psychology. Recommended.

This is a much-needed book for today's parents. At some point in the recent past, it seems that everything became about a child's self-esteem. Coaches and teachers started giving out "Participant" awards when kids simply showed up, rather than expecting a child to master skills and earn rewards and praise. This developed a culture of entitlement among many of our kids. The backlash against that has swung to the opposite extreme, and today's environment is now rather harsh and unforgiving toward kids. With so much bullying, teen suicide, extreme competitiveness, and other negatives, the focus is so often on what's wrong with our kids that it's no wonder that there are high levels of depression and anxiety at earlier and earlier ages. I admit that I have unfortunately been one of those parents who, though I do praise my kids and shower them with love, nevertheless developed the bad habit of focusing on their weak spots, failures, and faults. I know my intentions have been good; I want them to overcome these problem areas in order to have happy and successful lives. But this author has enlightened me into realizing that it doesn't work that way. And boy, does that take the stress off both parent and child. This book makes it clear that focusing on a child's strengths is not empty flattery and false praise. Rather, it enables kids and teens to see themselves for who and what they truly are: unique individuals with many gifts and strengths. Learning how to help our children and teens recognize and work with those gifts and strengths in all areas of their lives also enables them to strengthen the weak areas. And it is just such a more positive way to live.
