Customer Reviews

A most eloquently written book by William Halliday, charter member of the National Speleological Society, experienced caver, and physician. It's delightful reading, insightful and memorable. The book provides a broad perspective on everything cave related: science, history, caving techniques, and cavers. And it's comforting to read first aid advice written by an actual doctor. For instance I have never seen a more insightful explanation of hypothermia and its stages. Published in 1974, it's nearly half a century old, but at least half of its content is still relevant, and that is unlikely to change over the next half century.

TABLE OF CONTENTS

Introduction

1. Limestone caves and the rocks they inhabit

2. Lava tube, glacier, and other types of caves

3. Wind and water
