# Safety-II In Practice: Developing The Resilience Potentials

## Synopsis

Safety-I is defined as the freedom from unacceptable harm. The purpose of traditional safety management is therefore to find ways to ensure this "freedom". But as socio-technical systems steadily have become larger and less tractable, this has become harder to do. Resilience engineering pointed out from the very beginning that resilient performance - an organisation's ability to function as required under expected and unexpected conditions alike - required more than the prevention of incidents and accidents. This developed into a new interpretation of safety (Safety-II) and consequently a new form of safety management. Safety-II changes safety management from protective safety and a focus on how things can go wrong, to productive safety and a focus on how things can and do go well. For Safety-II, the aim is not just the elimination of hazards and the prevention of failures and malfunctions but also how best to develop an organisation's potentials for resilient performance - the way it responds, monitors, learns, and anticipates. That requires models and methods that go beyond the Safety-I toolbox. This book introduces a comprehensive approach for the management of Safety-II, called the Resilience Assessment Grid (RAG). It explains the principles of the RAG and how it can be used to develop the resilience potentials. The RAG provides four sets of diagnostic and formative questions that can be tailored to any organisation. The questions are based on the principles of resilience engineering and backed by practical experience from several domains. Safety-II in Practice is for both the safety professional and academic reader. For the professional, it presents a workable method (RAG) for the management of Safety-II, with a proven track record. For academic and student readers, the book is a concise and practical presentation of resilience engineering.

## Book Information

Paperback: 144 pages

Publisher: Routledge; 1 edition (June 22, 2017)

Language: English

ISBN-10: 1138708925

ISBN-13: 978-1138708921

Product Dimensions: 6 x 0.4 x 9.1 inches

Shipping Weight: 7.2 ounces (View shipping rates and policies)

## Customer Reviews

Erik Hollnagel (Ph.D., psychology) is Professor at the Department of Regional Health Research, University of Southern Denmark and Chief Consultant at the Centre for Quality, Region of Southern Denmark. Erik is also Adjunct Professor, Central Queensland University, Australia, Visiting Professorial Fellow, Macquarie University, Australia, Visiting Fellow, Institute for Advanced Study, Technische Universität München (Germany), and Professor Emeritus at École des Mines de Paris (France) and the University of Linköping (Sweden). Since 1971 he has worked at universities, research centres, and industries in several countries and with problems from many domains, including nuclear power generation, aerospace and aviation, air traffic management, software engineering, healthcare, and land-based traffic. His professional interests include industrial safety, human factors, resilience engineering, systems theory, and functional modelling. He has published more than 350 papers and authored or edited 20 books.
